Android phone or P5L?

Choose a handheld by what your server needs to do at the table.

Android phone

Take the order

On a supported Android phone, enter the order and modifiers and send them to the kitchen. Choose this setup when guests pay at a separate terminal.

Aldelo ePay Mobile (P5L)

Take the order and payment

Enter the same order in Express. When the guest is ready, accept an EMV chip card or a contactless tap on the P5L's built-in reader with compatible processing.

One order, from patio to kitchen

A guest orders a burger without onions. The server enters the change at the table. The kitchen sees the modifier on its configured display or printer. A T2 with Express can serve the counter.

Payment processing for your handhelds

For U.S. tableside payments, choose Aldelo Pay merchant services or a provider certified for the ePay gateway. Ask which account and devices fit your store.
