ALDELO Announces New "FACIAL AI" Login Feature

Facial Recognition Technology Secures POS, Labor, and Management Functions

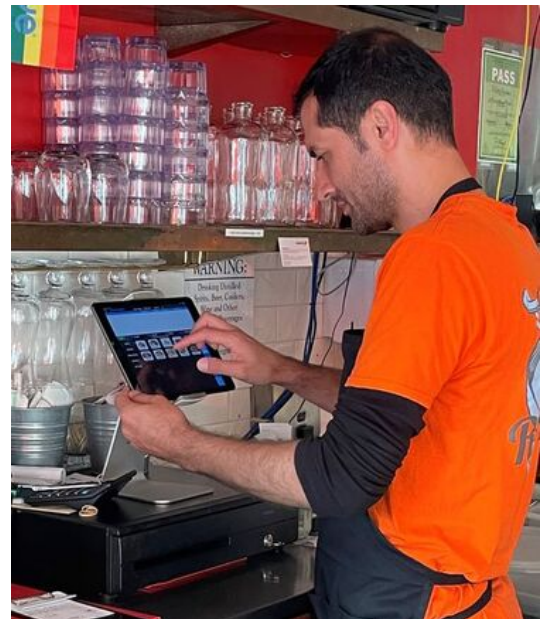

With the steady growth and usage of facial recognition technology in the mobility, security, health, banking, and retail industries Aldelo is the first POS developer to offer the technology to restaurants.

Aldelo's Facial AI technology requires no specialized equipment for capturing and authenticating users ... instead it utilizes standard POS tablet devices for providing secure access to Aldelo Express POS, timekeeping modules, manager functions, and Aldelo cloud back-office.
